

Scholarship and the Application of Knowledge

Add Sustainability as another additional guiding principle, that as globalization it permeates all goals.

A long discussion ensued about the document in general, it does not allow for the interaction between the different headings. It does not flow in of itself. Guiding principles should be more prominent and should guide the discussion about all the core values.

What are the guiding principles?

- Sustainability
- Globalization
- Collaboration, Interdisciplinary, student's working together
- Openness
- Innovation
- Social Responsibility, citizenship
- Creating usable Knowledge
- Educating for/facilitating lifelong learning
- Reasoned-risk taking
- Empowering individuals and communities

Technology, as a strategic goal, fits under many/all of these principles.
