SPS Commerce

Title: Database Engineer

Location: 150 Clove Rd. Suite 400, Little Falls, NJ 07424

Job Type: Full-Time (Entry-Level)

Compensation Type: Salary

Start Date: 6/1/2016

Job Description:

Are you looking for a one-of-a-kind company? An opportunity that only comes along once in a career? We’re the retail industry’s largest trading community with more than 60,000 customers in over 60 countries and we sharpen omnichannel retail supply chains, which allows business to advance at the pace of the consumer through a collaborative network community and the latest in cloud-based solutions. SPS Commerce is committed to hiring the best and brightest while providing an environment where employees can develop and grow. Our fast growth fuels opportunities for those who are committed to providing innovative solutions to our valued customers. If you are driven to be the best at what you do and thrive in a challenging, dynamic and collaborative culture, we want to hear from you!

The Database Engineer is an integral part of the operations team and overall service delivery of production systems. Under the direction of the Database Engineering Manager, the Database Engineer is responsible for administering databases along with all aspects of the service lifecycle. This position requires a relentless pursuit to develop, scale, improve, and support database services within the organization.

Primary Responsibilities:

- Responsible for the deployment, configuration, monitoring, and ongoing operations of database services
- Automating the environment
- Diagnose and resolve production problems
- Capacity planning and management
- Performance health of the SQL Server environment
- Develop and maintain backup and recovery procedures for database services
- Support developer teams by populating the data environment as per project requirements
- Administer user logins and access to database resources
- Off-hours support of the production environments
Qualifications:

- 1 to 3 years of professional SQL Server database administration experience
- Experience working with OLTP and Data Warehouse workloads
- Familiar with performance tuning and troubleshooting techniques
- Experience supporting database applications in a highly available environment
- Interpersonal skills necessary to effectively communicate with persons at all levels of the organization, including customers, employees, and management
- Ability to balance multiple projects and tasks concurrently in a fast paced environment
- Demonstrate proficient troubleshooting skills to provide resolution to incidents and problem management projects
- Adherence to the highest quality standards
- Ability to think strategically
- Continued development of technical skills
