Welcome CSAM Transfer Students!

- Just a few things to keep in mind as you transition to MSU/CSAM...
Make Sure To Connect With Your Major Department!

• The importance of connecting, and staying connected, with your faculty advisor should be a high priority.

• You want to make sure that you are academically on track and on track for graduation.

• Know the curriculum for your major. Understand the prerequisite course requirements.

• Know about the various program options within your major.

• Know about research opportunities.

• Know about the combined Bachelor’s and Master’s programs.

• Are there clubs/organizations within your major?
The Importance of Academic Advising

- Making wise academic decisions is a critical component to achieving your academic goals.

- As soon as you arrive on campus you need to create a sound academic plan.

- Because you are starting at MSU with credits already under your belt, you need to know exactly what courses you need to take, in what sequence and when you can expect to graduate. The sequencing of coursework is crucial to Science and Math majors in particular because of the structured and sequential nature of these curriculums.
The Importance of Academic Advising

• Make sure you know who your assigned faculty advisor is and where their office is located.

• Make an appointment to introduce yourself and become acquainted at the beginning of your first semester on campus.

• Plan to meet regularly and in advance of the “advising crush” that occurs prior to registration. Bring a list of questions.

• Discuss your academic plans, goals and any hurdles you are encountering. Discuss your timing for degree completion.
Understand ALL University Policies & Procedures

- Make sure you are aware of all important academic deadlines.
- **Make sure you understand course withdrawal procedures and ramifications.** Always consider the following:
  - Are there limits to how many classes you can WD from over the course of your academic career?
  - If you need to retake the class when is it scheduled next? What’s the likelihood that you can get in? Can you retake the course over the summer/at another school?
  - Is the class a prerequisite for another class you’ve planned to take the following semester? Will withdrawing impact your graduation plans?
  - Will WD affect your full time status – will this impact housing, financial aid, scholarships, etc.?
• Developing positive relationships with faculty is one way that you can directly influence the quality of your education!
