EXPANDING HORIZONS: onsite, offsite and online.

IT’S ALL HERE.

Gifted & Talented Program | Montclair State University
The Gifted and Talented (G&T) Program at Montclair State is celebrating 35 years of providing services for students, parents, educators and administrators with our largest-ever expansion of programs and services for 2016.

Ours is one of the nation’s oldest and most comprehensive programs. The G&T Program’s mission is to – in partnership with its constituents – offer a challenging and engaging program that contributes to and supports every student in meeting or exceeding academic standards and experiencing positive social-emotional growth.

- Our popular Onsite Program is a model for best practices in Gifted and Talented education.
- Our relationships with local school districts bring services directly to children and educators in our new Offsite Program.
- Our revitalized Online Program will kick off with a Wild Weather course. More online courses are in the works for 2016 and beyond.
Our onsite program has challenged G&T students at Montclair State University since 1981. Today, we invite K-12 students to explore potential careers through a diverse menu of courses.

Students, parents and our Subject Matter Experts (SMEs) collaborate to track student growth and differentiate instruction to meet each student’s needs.

Program Assistants provide in-class services such as social-emotional support, career exploration and communication and collaboration skills.

We offer onsite program courses on Saturdays and Sundays in the fall and spring, as well as two, three-week summer sessions.
ONLINE PROGRAM

We are expanding our online program for 2016.

New online courses will offer the same level of quality and the same sense of community as our onsite courses. Each online course will be a “flipped” course with dozens of brief “nanocourse” video demonstrations of individual concepts providing foundational content for activities, projects and applications. Regular, live “office hour” discussions will let students interact with each other and with the Subject Matter Expert (SME).

The SME who will be teaching our new *Wild Weather* course is Christopher Duvall, a meteorologist and our Associate Director! This will be the first online Montclair State University G&T course offered in 2016 with more to follow.

OFFSITE PROGRAM

We are taking the Montclair State University G&T Program on the road!

Our new offsite program delivers the same, high-quality G&T products and services as our onsite program – directly to area school districts.

The offsite program tailors a unique package of G&T products and services for participating school districts. Together with district staff we first conduct a Talent Search Protocol to identify G&T students and their specific talents, then create a comprehensive individualized strategic plan to meet student and district needs.

Whatever your district needs, the offsite G&T program will be there for you.
