How to Hide Totals in the Student Grades Summary

The default setting in Canvas is to show the total grade for each student in your students' grade summary. The total grades automatically re-calculate whenever you add or change an assignment grade. Sometimes it may be helpful to hide the totals from the student view until you've finished your grading for the semester.

1) Click on Settings in course navigation

2) Click on more options at the bottom of the course details

3) Under the new expanded options, check the Hide totals in student grades summary

4) Click Update Course Details
The student’s total grades will now be hidden. When a student accesses the **Grade** section of the course their page will appear similar to this:

Notice that the students are informed that the calculation of totals has been disabled.
