8.1.5

Core Concept 8.1.5 Algorithms & Programming

An algorithm is a sequence of steps designed to accomplish a specific task. Algorithms are translated into programs, or code, to provide instructions for computing devices. Algorithms and programming control all computing systems, empowering people to communicate with the world in new ways and solve compelling problems.

Communication Between Humans

Sign language is *used by people who are deaf.*

The gestures or symbols in sign language are organized in a linguistic way. ***Each individual gesture is called a sign.***

© 2006 Merriam-Webster, Inc.

A

P

8.1.5

Communication Between Humans

A

Sign language Each sign has three distinct parts:

- ◆ the handshape,
- ◆ the position of the hands, and
- ◆ the movement of the hands.

P

American Sign Language (ASL) is used most in our country. Other countries have their own sign language.

8.1.5

Communication Between Humans

A

P

Again, people have
always found ways to
communicate
nonverbally!

8.1.5

Algorithms

A

P

8.1.5

What Is An Algorithm?

List three tasks or things you do everyday?

A

P

8.1.5

What Is An Algorithm?

A

P

8.1.5

Examples of Daily Tasks

- ★ getting ready for school
- ★ brushing teeth
- ★ tying sneaker strings
- ★ travelling to or from school
- ★ school day
- ★ structure of a class
- ★ participating in clean-up time

What Is An Algorithm?

Take one item
from your list and
write the steps you
use to complete
that task.

A

P

8.1.5

What Is An Algorithm?

A

P

8.1.5

Congratulations!
You have just created
your first algorithm!

What Is An Algorithm?

Sooooo!
What is an
algorithm?

A

P

8.1.5

What Is An Algorithm?

An **algorithm** is a recipe book!
In the recipe book, you have
list the ***step by step***
instructions on how to make
your favorite sandwich.

A

P

8.1.5

The **sequence** is the ***specific***
order instruction of your
instructions.

What Is An Algorithm?

In fact, the instructions are so good, that anyone who follows the recipe can make the same, exact sandwich!

A

P

8.1.5

What Is An Algorithm?

A

A computer algorithm
is like a *set of
instructions that tell
the computer what to
do!*

P

8.1.5

What Is An Algorithm?

So, just like your recipe book tells you how to make a sandwich, a **computer algorithm** is a list of step by step instructions that a computer program follows in order to complete a task (run a program).

A

P

8.1.5

Writing Algorithms

Pseudocode

People use **pseudocode** (a notation resembling a simplified programming language, used in program design), to create and assess an algorithm before coding.

Writing Algorithms

Revisit your dance algorithm. Look for steps that you repeat for example “step to the left three times”. Revise your algorithm to include loops.

Dance Algorithm Revision#1

A

P

8.1.5

Types of Algorithms

A

P

8.1.5

Repetitive Algorithms or “Do Loop” requires a program to run multiple times.

Repetitive Algorithm or “Do Loop”

```
int product = 3;  
  
while (product <= 100)  
    product = 3 * product;
```

Repetition (the action of repeating something) in a program means that lines of code will be run multiple times. **Iteration** is a term similar to repetition, it means to continue repeating an action until you achieve the correct outcome.

Writing Algorithms

A

P

8.1.5

Repetitive Algorithm or "Do Loop"

```
int product = 3;  
  
while (product <= 100)  
    product = 3 * product;
```

Repetition (the action of repeating something) in a program means that lines of code will be run multiple times. **Iteration** is a term similar to repetition, it means to continue repeating an action until you achieve the correct outcome.

Pseudocode

Objective: Multiple a number until it the product exceeds 100.

1. Start
2. Product is 3.
3. Is product less than or equal to 100?
 - a. Yes! Go to 7.
 - b. No! Go to 4.
4. Multiple by 3 * product.
5. You have a new product.
6. Go to 3.
7. End

Computer Programming

What is Computer Programming?

A

P

8.1.5

Imagine you have a big box of colorful building blocks. Each block is like a little instruction for the computer to follow. When you put these blocks together in a certain order, they tell the computer what to do, just like when you follow the steps to build a tower with your blocks.

Now, these blocks are special because

Computer Programming

What is Computer Programming?

Now, these blocks are special because they're made for the computer. They tell it how to do things like play a game, draw a picture, or even talk to other computers far away. When you press a button on the computer or a tablet, it follows the instructions from these blocks to do what you want, like open a game or show a video.

A

P

8.1.5

Computer Programming

What is Computer Programming?

A

P

8.1.5

So, computer programs are like sets of instructions that tell the computer what to do, just like you use instructions to build something with your building blocks!

```
// Function to collect numbers from the user
function collectNumbers() {
  let numbers = [];
  for (let i = 1; i <= 4; i++) {
    let input = prompt("Enter number " + i + ":");
    let number = parseFloat(input);
    if (!isNaN(number)) {
      numbers.push(number);
    } else {
      alert("Invalid input. Please enter a valid number.");
      return null;
    }
  }
  return numbers;
}

// Function to calculate sum of numbers
function calculateSum(numbers) {
  let sum = 0;
  for (let number of numbers) {
    sum += number;
  }
  return sum;
}

// Function to calculate average of numbers
function calculateAverage(numbers) {
  let sum = calculateSum(numbers);
  return sum / numbers.length;
}

// Main function
function main() {
  let numbers = collectNumbers();
  if (numbers != null) {
    let sum = calculateSum(numbers);
    let average = calculateAverage(numbers);
    alert("Sum: " + sum + "\nAverage: " + average);
  }
}

// Call the main function
main();
