

Project Management Certificate

Business and technology professionals interested in project management can obtain a new online certificate that equips them with the skills and knowledge needed to coordinate, facilitate, manage, and lead projects and other initiatives.

About the Certificate

Nowadays, project management is widely considered to be the best and most effective method for implementing time-limited endeavors that are complex, large-scale, cross-functional, and high-stake. The ability to balance taking action with planning, to make difficult trade-off decisions, to navigate organizational barriers to change, to analyze risks, and to drive toward success are essential in becoming a high performing business and technology professional.

The courses in this program are highly aligned with the Project Management Institute (PMI) standards and practice guides. As such, our courses satisfied the educational requirements of the respective PMI certifications. For example, our courses in project management, i.e. MGMT565 and MGMT576, fulfill, partially or wholly, the educational requirements for CAPM and PMP credentials.

Credits may be applied towards a General MBA Degree at Montclair State University.

- 10.5 credits for completion
- Starts in Fall, Spring, and Summer

Project Management Career

To achieve project success, project managers play a critical role. They are responsible for managing the project from start to finish. In contemporary businesses and organizations, projects are everywhere, from launching new products and services to working on compliance and regulatory initiatives. Projects can also occur at all levels of the organization, ranging from smaller team-level projects to larger enterprise-class projects that involve people and resources across the organization.
